Laboratory note: The estimated concentration of the unknown peak in the sample is 0.01%. Currently PharmLabs laboratory cannot confirm an unidentified peak in your chromatogram due to interference (only with highly concentrated Δ8 products) from which we believe to be either (+)-Δ8-THC or Δ9-THC. At this time there are no reference standards available for (+)-Δ8-THC. (+)-Δ8-THC is a different compound from the main (-)-Δ8-THC cannabinoid and, therefore, these two compounds may have different efficacies. Using the most advanced instruments and techniques available, the separation of (+)-Δ8-THC and Δ9-THC is problematic for the scientific community as a whole. PharmLabs believes the unidentified peak to be a combination of (+)-Δ8-THC and Δ9-THC with the majority, if not all, of the concentration being (+)-Δ8-THC. Total (+/-) Δ8 Concentration is estimated to be 0.09%.

### Sample - Rainbow - Delta-8 THC Rice Krispie Treat

**Sample ID** SD220908-088 (52306)  
**Matrix** Edible (Other Cannabis Good)  
**Tested for** Eighty Six Brand

**Sampled** - **Received** Sep 08, 2022  
**Reported** Sep 14, 2022
