ABOUT US

Our Story

Our founders started in the vape industry, where there were always ways to change the game and improve the quality of vaping technology to create the most potent products possible. In 2018, the Farm Bill was passed, making hemp derivatives containing less than 0.3% Delta-9 THC legal, thus opening up the CBD/THC industry to an explosive new future.

At Eighty Six, we've been advocates for hemp since the beginning, so when we found out about hemp-derived, psychoactive cannabinoids, we were hooked! We discovered that the lesser known, Delta-8 THC, HHC, and THC-O Acetate deliver intense effects with the powerful potential to spur creativity, elevate your mood, and keep your mind clear and focused. Unlike Delta-9 THC, Delta-8, HHC, and THC-O's psychoactive effects are minimal, allowing you to elevate your mind while remaining clear and in control.

Unsurpassed Quality You Won't Find Anywhere Else

Hemp-derived, psychoactive cannabinoids are still relatively new to the public, and we want to make these incredible analogues of THC more accessible to consumers nationwide. Our products prioritize flawless, lab-tested quality and transparency with a range of vape cartridges, vape disposables, universal application dabbing syringes, and edibles to choose from. Whether you're a beginner to the world of cannabis, or simply looking to branch out and try something new, Eighty Six has the products you need to get the uplifting energizing buzz of Delta-8, HHC, and THC-O.

Our unique, delicious flavors set us apart from other hemp products on the market. Between mouthwatering vape cartridges and disposables based on the hottest exotic strains in the market and a variety of sweet and indulgent gummies and chocolate bars, Eighty Six delivers a near-perfect experience time and again.

HOW TO READ A TEST REPORT

At Eighty Six, our goal is to ensure you enjoy Delta-8 safely, which is why each product undergoes a rigorous full panel testing by an accredited third-party laboratory.

Cannabinoid Potency

At the very least, the ideal Certificate of Analysis (COA) should list out cannabinoid potencies, with the two most important cannabinoids being Delta-8 THC and Delta-9 THC.

Remember: Delta-9 THC should not exceed 0.3%.

Two of the most important terms to consider in understanding a COA are ND and < LOQ. The ideal test report should contain either of these symbols to determine what should not be present.
